

## NOTICE OF MASTER PLAN COMPLETION

### Wastewater Pumping Station Master Plan Study

Halton Region has completed the Wastewater Pumping Station Master Plan study for 59 sewage pumping stations located within the drainage areas of the Burlington Skyway, Oakville Southwest and Oakville Southeast Wastewater Treatment Plants (refer to map). The objective of this study was to prepare a comprehensive plan for asset renewal which considers important issues such as normal aging and deterioration of pumping stations, capacity demands (current and future) and operational efficiency.

The Master Plan identified and evaluated a range of alternative solutions and, at a broad level, recommended a preferred pumping station management strategy. The Master Plan took into account public and agency comments including comments made at each of four Public Information Centres held in Burlington and in Oakville.

It is anticipated that projects resulting from the preferred strategy will be subject to either Schedules A+ or B type projects of the Municipal Class Environmental Assessment. In the future, the Master Plan will support more detailed studies to confirm servicing strategy and to identify the specific projects in order to comply with the requirements of the Municipal Class Environmental Assessment process.

Any comments related to the pumping station management strategy outlined in the Master Plan should be submitted in writing by August 29, 2012 to:

Magda Bielawski, P.Eng., PMP
