Household Food Insecurity & Cost of a Nutritious Food Basket

Background

The purpose of this health indicator report is to provide information about household food insecurity and the cost of basic healthy eating in Halton Region.

Household food insecurity refers to the inability of a household to access adequate and nutritious food due to a lack of money. A nutritious food basket reflects the cost of a basic healthy diet that meets the nutrition recommendations of Eating Well with Canada’s Food Guide and represents the average purchasing patterns of Canadians. It is used to monitor the affordability and accessibility of foods by relating the cost of the food basket to individual and household incomes.

This health indicator report uses data from the Canadian Community Health Survey (CCHS) for the section on household food insecurity, and data from Halton Region Registered Dietitians for the section on the Nutritious Food Basket. The Nutritious Food Basket data are based on the methods outlined in the guidance document from the Ministry of Health and Long-Term Care.

Food secure and marginally, moderately, or severely food insecure are defined in the table below. For this report, the food insecure category includes households that were marginally, moderately, or severely food insecure. These categories were combined to ensure a large enough sample size for analysis.

### Household food insecurity definitions

<table>
<thead>
<tr>
<th>Status</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Food Secure</td>
<td>No indication of difficulty with income-related food access</td>
</tr>
<tr>
<td>Marginal</td>
<td>Some indication of worry or barriers to adequate, secure food access</td>
</tr>
<tr>
<td>Moderate</td>
<td>Compromise on quality and/or quantity of food consumed</td>
</tr>
<tr>
<td>Severe</td>
<td>Reduced food intake and disrupted eating patterns</td>
</tr>
</tbody>
</table>

See Data Notes for more information on these categories.

Household Food Insecurity

In 2013/14, 6.8% of Halton households and 12.2% of Ontario households were food insecure. This difference was statistically significant.

There were no statistically significant changes over time in the percentage of households that were food insecure in Halton or Ontario.

Cost of a Nutritious Food Basket

In 2017, the cost of a basic healthy diet for a family of four (two parents and two children) living in Halton was $212.47 per week. The average cost of a healthy diet in Halton has increased by 3% since 2016, and by 59% since 2003. The average cost of a nutritious food basket in Ontario decreased slightly from $205.45 in 2016 to $204.00 in 2017.
The monthly low income scenarios for 2017 show that low income households continue to struggle to pay rent, buy food for a nutritious diet, and pay basic expenses.

<td>$593</td>
</tr>
</tbody>
</table>

### Data Notes

For more information on CCHS, methods, statistical significance and limitations associated with health indicator reports, please see the Data Notes and Guide available at [halton.ca](http://halton.ca).

**Definitions:** Food insecurity data are from the CCHS’s Household Food Security module, which consists of 18 questions about the presence of food insecure situations in the household over the past 12 months. These situations range from worrying about running out of food to going a whole day without eating because of the inability to afford food. Prior to the 2017 Household Food Security & Cost of a Nutritious Food Basket Indicator Report, the food insecurity definition was based directly on the CCHS’s derived variable “Household Food Security Status - Modified version”, which categorized households with two or more affirmative responses to the food insecurity questions as “food insecure”.

Beginning in 2017, the food insecurity definition was expanded to include “marginal” food insecurity, which includes households with one affirmative response to the CCHS’s food insecurity questions. This expanded definition is based on the work of the PROOF Food Insecurity Policy Research program. 2013/14 is the most recent time period for which CCHS data are currently available.

Basic expenses could include: heat & hydro, telephone, transportation, child care expenses, laundry, non-prescription drugs, toiletries and cleaning products, and costs associated with children in school.

For the one full-time minimum wage earner scenario in the Halton Monthly Low Income Scenarios for 2017 table, the rate of $11.40/hr reflects the minimum wage as of May 2017, to coincide with the month in which Nutritious Food Basket data were collected. In this scenario, income reflects the dollar amount after federal and provincial taxes, Employment Insurance and Canada Pension Plan have been deducted.
