Town of Oakville	1.8

Information presented in this infographic is based on the Statistics Canada 2021 Census and previous Census years. Statistics Canada conducts a national Census of Population every five years. Statistics Canada will be releasing Census findings throughout 2022 in a series of seven data releases.

Definitions: **Median income** of a specified group is the amount that divides the income distribution of that group into two halves, i.e., the incomes of half of the units in that group are below the median, while those of the other half are above the median. Median incomes of households are calculated for all units, whether or not they had income. **Total income** refers to the sum of certain incomes (in cash and, in some circumstances, in kind) of the statistical unit during a specified reference period. **Employment income** refers to all income received as wages, salaries and commissions from paid employment and net self-employment income from farm or non-farm unincorporated business and/or professional practice during the reference period. For the 2021 Census, the reference period for income data is the calendar year 2020, unless otherwise specified. **A census family** is defined as a married couple (with or without children), a common-law couple (with or without children) or a one-parent family. **Source:** Statistics Canada. Census Profile, 2021 Census of Population.
