Data Notes

The data presented here are preliminary, as Halton Region Public Health works to gather additional data to refine estimates and fill in gaps. It is important to note that there is significant overlap in the estimates presented in the placemat. For example, many older adults captured in the estimate of the population aged 65+ would also be captured in the number of individuals living in retirement or long-term care homes. Similarly, the estimate for the number of residents eligible for Phase III includes individuals who may be already captured in earlier phases (e.g. healthcare workers, Indigenous populations). Note that in many cases, census data are only available in 5-year age groups, therefore the age ranges presented may not align exactly with the ages that the COVID-19 vaccines have been approved for. As of February 17, 2021. Subject to change based on vaccine supply and provincial direction.
